Malignant or invasive cancer

# What is Lung Cancer?

# What is Lung Cancer?

# How deadly is lung cancer?

● Colorectal ● Breast ● Prostate

Lung cancer takes more lives annually in the U.S. than the next three most common cancers combined

# How deadly is lung cancer?

● Colorectal ● Breast ● Prostate

Lung cancer takes more lives annually in the U.S. than the next three most common cancers combined

Lung cancer kills about 2.5 times as many men as prostate cancer

# How deadly is lung cancer?

● Colorectal ● Breast ● Prostate

Lung cancer takes more lives annually in the U.S. than the next three most common cancers combined

Lung cancer kills about 2.5 times as many men as prostate cancer

Lung cancer kills about 1.5 times as many women as breast cancer

**What are genes are involved in lung cancer?**

# **What is the primary goal?**

To better characterize ALK's role in cancer immune envision.

# What is the primary goal?

To better characterize ALK's role in cancer immune envision.

## AIM 1

Characterize specific ALK mutations in lung cancer.

# What is the primary goal?

To better characterize ALK's role in cancer immune envision.

## AIM 1

Characterize specific ALK mutations in lung cancer.

## AIM 2

Identify expression of Immune genes in ALK driven lung cancer

# What is the primary goal?

To better characterize ALK's role in cancer immune envision.

## AIM 1

Characterize specific ALK mutations in lung cancer.

## AIM 2

Identify expression of immune genes in ALK driven lung cancer

## AIM 3

Identify immune evasion proteins that interact with ALK.

# AIM 1: Characterize ALK mutations in NSCLC

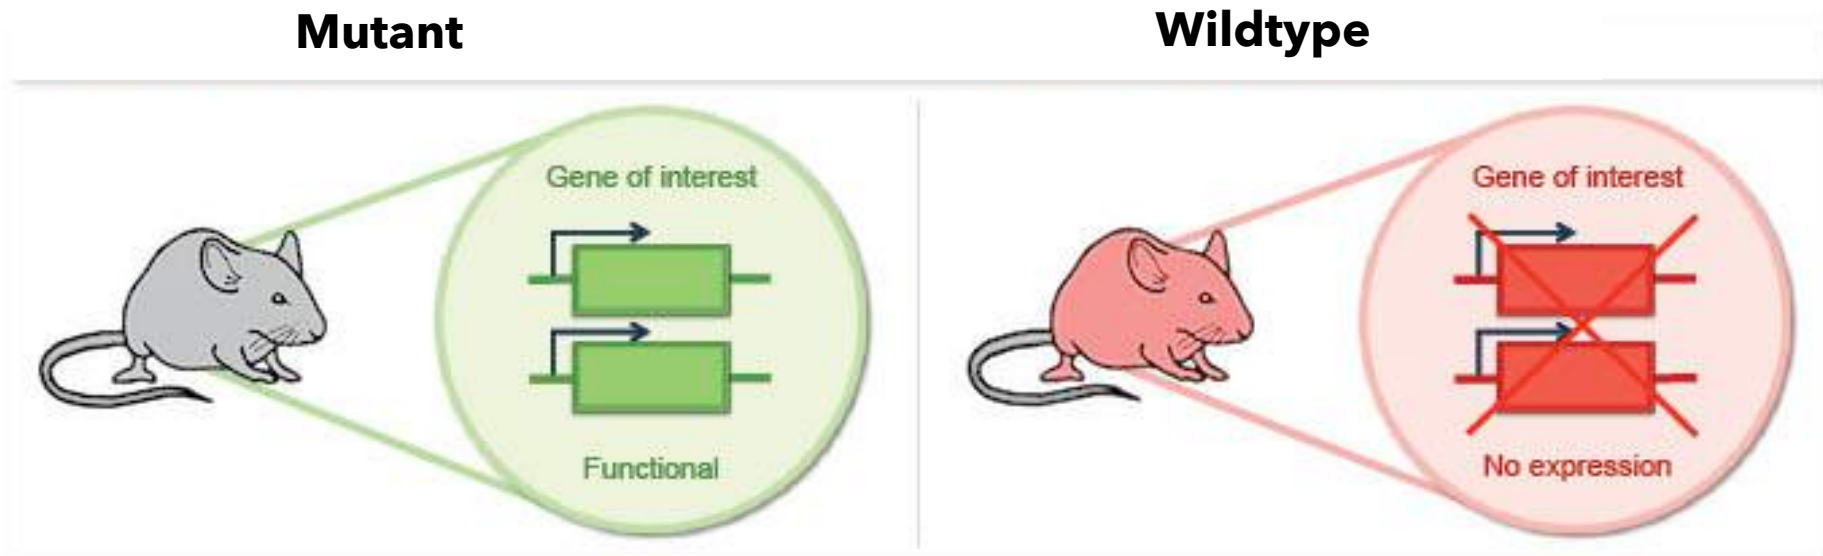

Species/Abbrv

# Conclusions

- **ALK is a gain of function mutation that is involved in many cancers.**
- **ALK may have a function related to immune system and cancer immune invasion.**
- **By learning more about ALK and its role with the immune system, it can be better understood the role ALK plays in promoting lung cancer.**

# Future Directions
